INT. PATENT CLASSIF.:

MAIN: B65D-071-24
 SECONDARY: B65D-005-49

BASIC ABSTRACT:

JP 08207959 A UPAB: 19961021

The container has a partition part (16) which starts from central part of the bottom (11). A reinforcing part (17) rests upon the partition part in longitudinal direction. A pair of external wall parts (13, 15) extend upwards from the edges of the bottom.

Multiple partitions (18) connecting the external wall parts and the reinforcing part are placed orthogonally. As a result, a predetermined interval is maintained between external side wall parts and the reinforcing part.

ADVANTAGE - Improves storage rigidity. Prevents container from being damaged, during transportation.
